Release Notes
March 15, 2019
Version 4.0.0

The Intel Unite® client app for Linux version 4.0.0 has been updated to include Node Webkit versions 0.29.4 (RHEL) and 0.35.5 (Fedora & Ubuntu), which includes functional and security updates. Users should update to the latest version.

This version is compatible with version 3.x and 4.x versions of the Intel Unite® solution.

If your organization or learning center has implemented the Intel Unite® solution for meetings or classrooms (Enterprise mode), this app provides access to collaborative sessions connected to the corporate network - either directly or through a VPN. If you need help connecting, please contact the organization's IT department.

SMARTER MEETINGS AND CLASSROOMS START HERE

Intel Unite® software powers secure, connected meeting spaces and classrooms- whether session participants are sitting around the table or halfway around the world.
Features included with this app:
- Connect to a session using a secure shared PIN
- Connect to a session by a scheduled meeting link received in an email or other applications**
- See who else is attending
- View content from any session attendee sharing their screen
- Present to other participants connected to the Intel Unite® application.
- Network Status indicator
- Localized app versions, supported languages are English, Spanish, French, Portuguese, German, Italian, Korean, Japanese, Chinese Traditional, and Chinese Simplified

** The ability to connect with a link and auto-reconnect requires installation of Intel Unite® software version 3.0 or higher within the organization's IT infrastructure
